

# MicroComm DXL

## ADM-SOF DXL System Software

### Description

The DXL System Software CD package contains the MicroComm DXL Configuration, Logging, and Diagnostic application. This program runs on standard IBM PC compatible hardware and is used to:

- manipulate the configuration of DXL systems,
- review and control the logs generated by the system, and
- view the diagnostic information produced by the system

The DXL Administrator application consists of four main modules; the Shell, the Configuration Module, the Logging Module, and the Maintenance Module. These four modules are nearly independent parts of a single Windows application.

A standard windows installer will install this application. In the process, it will create an application directory to hold the application and all its data subdirectories.

### Features

- windows based user interface makes inputting configuration data easy and intuitive
- configuration software allows the system operation to be changed for different times of the day

### Specifications

#### Minimum System

CPU	Intel Pentium or higher
Operating System	Microsoft Windows XP Microsoft Windows Vista 32/64 bit Microsoft Windows 7 32/64 bit
